

PRESS RELEASE

FOR IMMEDIATE RELEASE

September 30, 2011

### **iPhone app for I.T. Contractors hits the market**

Eclipse Computing Solutions UK announce the release of a new iPhone app specifically designed with I.T. Contractors in mind. Contractor Expenses simplifies tracking and submission of expense and mileage claims together with providing the latest contracting news from leading contractor sites.

Contractor Expenses is simple to use, but provides advanced features such as photo invoice/receipts, repeatable expenses, auto mileage rate allocation based on country specific rates/limits, multi-date selection for frequent journeys, data export in xml or configurable order csv, and other features designed to reduce data entry and focus on the requirements of I.T. Contractors.

Features include:

- Photo invoice/receipts
- Data export in XML or configurable order CSV with photo invoices zipped and attached
- Cumulative mileage calculation and auto allocation of mileage claim rates based on country specific limits
- Multi date selection for journeys to remove need for multiple date entry for visits to regular clients
- Latest contracting news collated from leading contracting site feeds
- Set expense items to repeat (i.e. for mobile phone bill), capture VAT, receipt reference, category and more

The creation of the app was borne from the frustration with generic expense and mileage apps of Eclipse Director and long term I.T Contractor, Steve Rennocks, *"There's just too much data entry required by most apps, and no focus on the specifics or working practices of any one industry"*

Contractor Expenses is available now from the iTunes App Store.
